Dryz[®]

Gingival Hemostatic Retraction Paste

CREATE A **DRY** WORKING ENVIRONMENT **EVERY TIME**

Features:

- Stops gingival bleeding and seepage that may interfere with impression taking.
- Fast-acting.
- Light green color makes the material easy to detect.
- Great for tissue management when seating restorations, placing rubber dam clamps (controlling bleeding), bleaching teeth (to manage moisture) and restoring subgingival cavities.

Syringe Dryz into the gingival sulcus, making sure to fully contact all of the soft tissue.

Rinse Dryz using copious amounts of water to reveal a clean, retracted gingival sulcus and margin of the prepared tooth.

Dr. Harry Long, DMD
